CONNECT

Integration APIs for Seamless Connectivity

Enterprise
IMAGING SYSTEMS

PRODUCT TECHNOLOGY ALLIANCE PARTNERS OF

intact

TraX Connect is the term for our Integration APIs (Application Programming Interface) that enables the TraX suite of software solutions to communicate with all major ERP and accounts systems. To date TraX has integrated with over 100 ERP and accounts systems.

Pre-built 2-way integrations are in situ for all major ERP & accounts systems including...

Microsoft Dynamics 365
Business Central

... and many more.

Benefits & Features

Access TraX from within your back office system

- This enables you to view all of the documents held in TraX from within your ERP/accounts system. This saves your team having to navigate away from your core system to find and view documents.

Automatic document data feed

- Invoices and documents captured in TraX are scanned and read with key data points synced to and from your back office system

Two-way real-time integration

- Allows both systems to pass information and status updates back and forth.

“I would describe TraX as a one-stop-shop solution. Everything is contained within the system and there's complete transparency and visibility.”

Tomás English

Financial Controller, Respond

TraX
CONNECT

Facilitate accurate, real-time data sharing, collaboration, and seamless interconnectivity
